Learning has never been more lifelike

Limbs & Things was founded after Medical Artist Margot Cooper discovered a gap in the learning journey of medical students who jumped straight from theory into practicing on animal flesh or patients. The need for a **safe and repeatable training** medium was evident, and so the vision for Limbs & Things was created.

In 1990, Limbs & Things was born from a kitchen top in England, England. Now a global business with offices in USA, Australia, and Sweden, the **family-owned** company still holds the same values and are proud to be supporting the learning of competent and confident clinicians around the world.

Our products are designed and manufactured at our Head Quarters before being exported to **70 countries worldwide**. Each model is created by our committed team of experts who collaborate with **medical leaders** to carefully create each groundbreaking innovation to achieve our mission.

limbs&
things
SINCE 1990

Investing heavily in **research and development** ensures our models accurately replicate anatomy and feel lifelike to the touch, while utilizing the best materials and technology to achieve realism and practicality. Each product “brings to life” a task to be learnt and is suitable to **meet education curricula** across the globe.

Our commitment to simulation doesn't stop once a product has left the door. That's why we are known for our **outstanding customer service** and **dedicated field based sales team**, trained with expert product knowledge, who will always be on hand to support your simulation needs.

“

Our objectives have grown out of the need for repetitive practice and the learning of skills, as they apply to procedure and care in the treatment of patients.

All skills training requires endless opportunity to practice over and over again; this is what we strive to offer our medical colleagues with careful focus on accuracy and purpose.

Our company is now enjoying its 34th year of continual development and manufacture of our innovative products.

Established in Bristol, United Kingdom, we serve hands-on training requirements world-wide and every member of our staff takes pride in that role. We have an atmosphere of dedication to meet the clients' needs.

Best wishes from all of us for 2024.

Clean Bleed[®] Mat

70400

By increasing realism,
we develop true to
life responses.

Designed to support any simulation scenario where external blood or fluid loss is a key indicator and measure of emergency interventions taken, such as gunshot wounds, post-partum haemorrhage or post-operative bleeds.

How does it work?

No mess
Controllable fluid flow
Easy to set up
Re-usable

KEY FEATURES & BENEFITS

- No mess, no fuss, easy set up
- Unique sealed blood flow, heightening the realism of simulation scenarios for more accurate training
- Controllable flow of blood
- Portable and durable for use both indoors and outdoors
- Suitable for use with simulated patients, task trainers and full body manikins
- Can be used to simulate a range of fluids
- Cost effective – re-usable pads and blood save time and money

SKILLS

- Visual inspection or body assessment
- Identification and assessment of the speed and colour of the bleed or flow
- Assessment of the speed and relevance of the initial trainee interventions
- Assessment of the ongoing patient condition and impact of prior interventions on the patient
- Quantify Blood Loss (QBL)

The **Clean Bleed® Mat** is independent of any training system and can be used alongside both simple and complex training models (as well as simulated patients) for use in simulation.

Designed to support different scenarios

Simulated Patient

Task Trainer

Full Body Manikin

Easy to clean up?

Post simulation, the pump mechanism can be reversed to remove the majority of the blood back into the fluid reservoir. The residual blood within the pad can be manually drained away or washed for repeat use.

Can I use my own pads?

The design of the mat bag allows the use of a standard sized inco/chux pad (60 x 90 cm).

Where would I use it?

Any scenario or clinical procedure where the external flow of blood (or any other fluid) is a critical signal to act and intervene. The flow of blood can be measured either visually, or by weighing.

- High flows: vaginal trauma (including PPH); abdominal, chest and neck trauma; loss of limb and post-operative bleeds.
- Low flows: head or peripheral trauma; post-operative bleeds; meconium fluid.

The **Clean Bleed® Mat** is independent of any training system and can be used alongside both simple and complex training models, as well as simulated patients.
